WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

A low pressure trough over the Pacific Northwest will continue to deepen and have more influence on Northern California weather over the next few days. The Southwestern flow associated with the trough have pushed moist unstable conditions off to the east and southeast of Northern California, and thunderstorms are not expected through Wednesday. Temperatures will cool to 2-5 degrees above normal and minimum RH will be 8-18% in inland areas during this time. Many inland areas will continue to see humidity only recover to 25-40% overnight. Afternoon Southwest to West winds will increase to 10-20 mph with gusts to 30-35 mph Sunday, and further increase Monday and Tuesday with gusts to 35-40 mph. Minimum humidity in these areas will be 7-15% each day. In the East Side PSA (NC08) these winds will be on top of areas where scattered lightning strikes occurred Thursday through Saturday and where holdover ignitions may exist. This situation is considered a High Risk for significant fire development. The dry and breezy conditions in the Northeast portions of CA and Northern Sierra PSAs will fall just below High Risk criteria Sunday through Tuesday. Winds will diminish on Wednesday as the trough moves off to the east. On Thursday another trough will approach the coast. There is a possibility that this trough will pull subtropical moisture northward into our eastern and northern areas and produce isolated thunderstorms late Thursday and Friday. Confidence in this possible lightning event is low at this time, but the situation will be closely watched.

SOUTHERN CALIFORNIA

Abundant monsoonal moisture will lead to scattered showers and thunderstorms over the local mountains of Southern California and the deserts, mainly south and east of I-15. The bulk of the convection in the mountains will occur on the desert side where slow storm movement may lead to locally heavy rainfall. One or two showers may occur in the Sierras and Inyo National Forest the next couple of days, but the threat of storms in Central California has essentially ended. High temperatures will continue to be a few degrees above normal through the middle of the week with highs in the upper 70s to lower 80s along the coast and in the mountains, mid to upper 90s in the valleys and 105-110 in the deserts. The moisture will keep RH readings higher this week and only the central coast interior will see teens for minimums. Most areas will see light winds but west winds of 15-25 mph with gusts to 30 mph will be possible in and near the Antelope Valley during the afternoon. A secondary trough over the Pacific Northwest will push most of the moisture east of the area toward the end of the week. By Friday, the only storms expected will occur near the Colorado River. Temperatures will cool a bit due to an increase in onshore flow. It may turn windy in the Sierras Tuesday night or Wednesday with breezy conditions continuing in the Sierra high country eastward into the Inyo National Forest through the end of the workweek.

WEATHER OF CONCERN

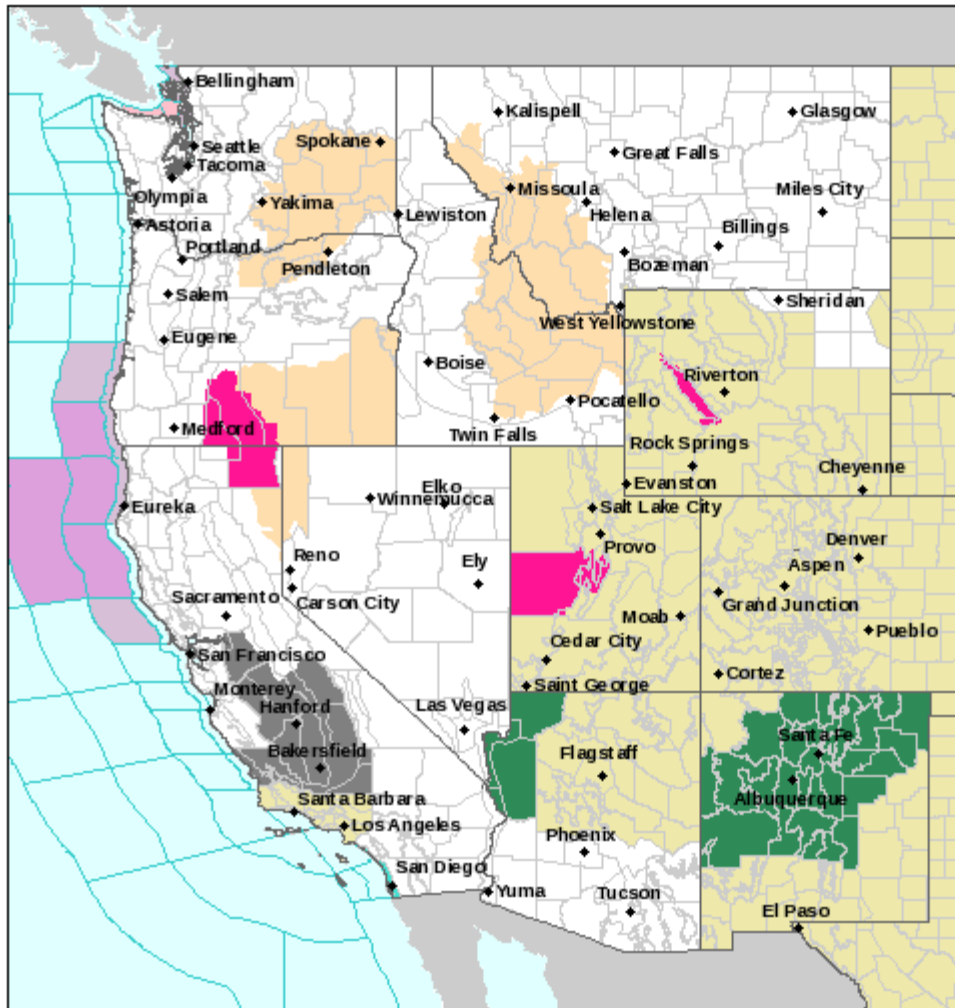

Weather of Concern

- Red Flag Warning in effect until 2100 hours this evening for areas in Modoc County
- Once the Red Flag Warning expires, a Fire Weather Watch will be in effect from Tuesday Afternoon through Tuesday evening for areas in Modoc County
